

ARCHITECTURE OVERVIEW

Public Ship Log

A public build-streak tracker: log work in Telegram, count GitHub commits, publish a heatmap, and post AI-drafted updates only after approval

Swapnil Dhavate

Business Analyst · MES & Agentic AI

WHAT IT DOES

From a one-line note to a public streak

1

Log

/log in Telegram, or just push a commit

2

Count

Streak counted per day in India time (IST)

3

Draft

10:30 PM IST: AI writes a short update post

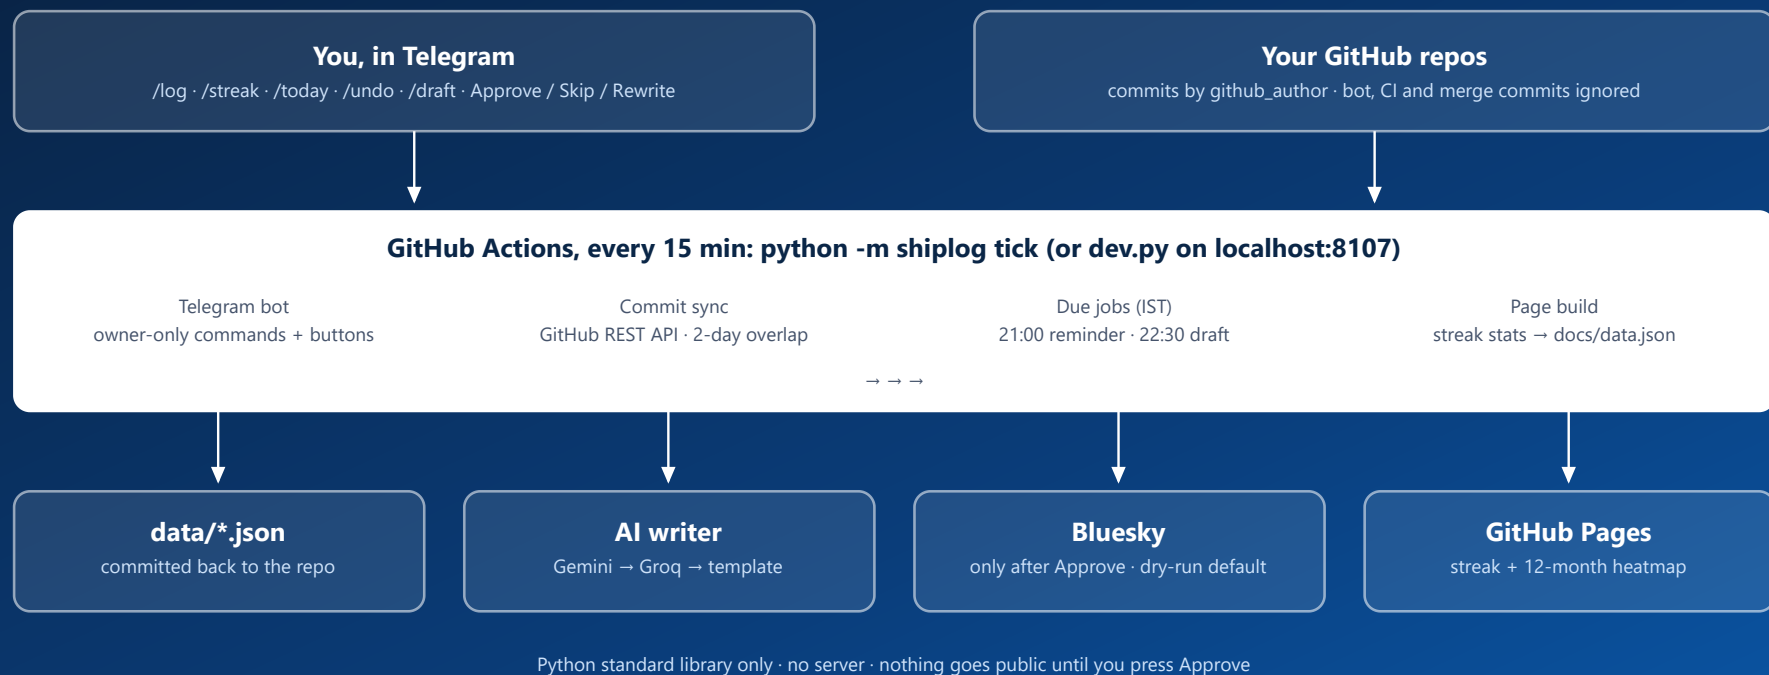

4

Approve

Your tap in Telegram sends it to Bluesky

SYSTEM ARCHITECTURE

Serverless: one scheduled job does everything

RELIABILITY & SAFETY

Safe to re-run, nothing posted by surprise

Re-runnable jobs

Reminder and draft check the time and fire once per day

AI fallback chain

Gemini, then Groq, then a plain template

Human approval gate

Approve button + BLUESKY_DRY_RUN=1 by default

Honest streak

Bot, CI and merge commits never count

Owner-only bot

Messages from anyone else are ignored

Test-backed

10 unit tests: streak, IST midnight, hours, 300-char limit

TECHNOLOGY STACK

Plain Python, all free services

Python 3 stdlib

No packages to install

Telegram Bot API

Logging and approval buttons

GitHub REST API

Commit sync

GitHub Actions

15-minute schedule

GitHub Pages

Public heatmap page

Gemini 2.5 Flash

Main post writer

Groq · Llama 3.3 70B

Backup writer

Bluesky AT Protocol

Publishing approved posts

COST STRUCTURE

₹0/month

Free GitHub Actions and Pages for a public repo, free AI tiers, free Telegram and Bluesky

GROWTH POTENTIAL

From streak counter to build-in-public assistant

More platforms

Mastodon or LinkedIn next to Bluesky

Weekly recap

One summary post every Sunday

Instant replies

Webhook instead of the 15-minute poll

Per-project view

Tag entries and filter the heatmap
